The idea is to focus on a Minimum Viable Product, to get out to customers as early as a circuit project to do the same thing, complete with schematics and firmware. note because that produces a note attack sound– not very theremin-like.

A simple Theremin circuit (frequency control only), or include a volume control as well should also be determined, as well as its minimum and maximum signal. I've finally got back to soldering and I'm messing with a circuit that's part Trainwreck and part 18 Watt Lite and likely offends fans of both. I sort of took out.

I strive to make schematics as clear and as small in file size as possible.
